

12_08 Outline

- Explain the principles of Recursion:

With Recursion we are able to repeat things in a similar but a way that is not exactly the same. This allows us to look at small but different things that happen over time. With changes in numbers to the size and weight difference of something. It allows on to look a things in a logical standpoint and think of the different things that can happen when something is altered.

- Illustrate

Illustrate the different ideas of Recursion in PPT.

- Example

Show example with custom piecewise function and how recursion effects it.
