

## Visualizing the Recursive Solution

```
void solve(int n, int i, int j, int k){  
    if(n==1) movedisk(i,k);  
    else{  
        solve(n-1,i,k,j);  
        solve(1,i,j,k);  
        solve(n-1,j,i,k);  
    }  
}
```
